Fundermax

Whether it's for furniture, facades, or interior design, Fundermax is where ideas and materials come together. As the world market leader of high-quality compact laminate panels, the company can proudly look back on 130 years of history. Our continued success is due to our high quality products, innovative design, wide variety of applications and decors, and sustainable production. Our panels are made in Austria, with a love for wood as a natural raw material, and endless opportunities for unique creations and innovative ideas.

- Modern production facilities in Austria and Norway
- Approximately 1,400 employees
- Annual turnover of 430 million euros
- Part of Constantia Industries AG
- State Prize for Corporate Quality (2018)

1 Product Information

**“Only good ideas and products
stand the test of time.”**

(Isabelle S., Project Manager)

Material Description

Max Compact Exterior Authentic panels are duromer high-pressure laminates (HPL) in accordance with EN 438-6 that are produced under high pressure and heat. Thanks to the double-hardened acrylic polyurethane resins, the durable panels offer effective weather protection and are suitable for a wide variety of outdoor applications.

1 01 Construction of Max Compact Exterior Authentic Panels

Material Properties

Extremely weather resistant	Double-hardened	Scratch resistant	Solvent resistant
Easy to clean	Impact resistant	Easy to install	

Sizes

- JU = 4,100 x 1,300 mm
- XL = 4,100 x 1,854 mm

Core

The core is available in F-quality and brown color.

Thickness

For thicknesses, versions, and tolerances, please see the Product Portfolio on page 16.

Slip Resistance (NH Hexa)

- R10 in accordance with DIN 51130
- Group C in accordance with DIN 51097

Approval – General Type Approval

Approval No. Z-10.3-712

1 02 AU01 NT Authentic Mocca

1 03 Authentic NY Sky

2 Sustainability and Environment

**“My work should leave
a mark, but in a
sustainable way.”**

(Henrik T., Entrepreneur)

Sustainability in the Company

Fundermax is a specialist in the processing of renewable raw materials, and has been for over 130 years. This means closed production cycles, recycling of remnants in the manufacturing process, and energy recovery in green electricity district heating plants. Fundermax supplies district heating to over 8,500 households.

Quality Management

The production facilities and processes are based on internationally recognized standards (ISO 9001, ISO 14001, ISO 50001, ISO 45001). Fundermax also follows current standards such as FSC®-C101966 and PEFC™ (details: www.fundermax.com) when procuring raw materials and preliminary products.

Sustainable Production

Max Compact panels consist of natural fibers (approximately 65% of the total weight) and are mainly made of wood that has been processed into "kraft paper". This kraft paper is a byproduct in the production of lumber or in sawmills. The raw materials come from suppliers who are certified in accordance with the FSC®-C101966 and PEFC™ standard, which guarantees sustainable forest management.

The kraft paper is impregnated with synthetic resins through an impregnation process, then is dried and pressed under high pressure and heat into durable moisture resistant panels. They contain no organic halogen compounds, asbestos, wood preservatives (fungicides, pesticides, etc.), sulfur, mercury or cadmium.

The exhaust air extracted during drying is treated by regenerative thermal oxidation. The heat generated is fed back into the process, which saves approximately 10,000 ton of CO₂ each year. This exhaust air treatment was also awarded the "klimaaktiv" award by the Austria Energy Agency and the Federal Ministry for the Environment.

Disposal

Chips are produced when cutting and milling Max Compact panels. These can be thermally disposed of in modern heating systems without the formation of hydrochloric acid, organic chlorine compounds or dioxins. Max Compact only decomposes into carbon dioxide, nitrogen, water and ash. The resulting energy is used for district heating. Disposal in commercial landfills is also allowed, however, please be sure to observe and follow the country-specific laws and regulations.

3 Authentic Collection

“The same applies to materials: authenticity is key.”

(Lydia H., Client)

We are all unique, strong in character and value one thing above all: authenticity. We have that in common with Exterior Pro 2.2 Authentic. The product structure provides an incomparable, natural appearance. The production process of this “pure material” creates shades, color nuances, and facets that make each piece unique.

Change is part of the life and character of Authentic panels. The individual appearance of the organic panels is created by the power of nature (e.g. exposure to the sun). This intentional fading isn't at the sacrifice of durability. The material is extremely durable and permanently protects buildings from weather, UV rays, impact, solvents and other influences.

Decors

Lovers of brown and natural tones can now enjoy three completely new decors, all part of the Authentic Natura (AUTN) family.

Authentic Mokka

Sometimes stronger, milder, darker, lighter – all in all, Authentic Mokka is a more than tasteful composition.

Authentic Pecan

With pecans, the treasured content is protected by a resistant shell. The same is true of a building's interior and facade. By using "Authentic Pecan" an aesthetically pleasing look can be achieved.

Authentic Caramel

Facades in a "salted caramel look" range from golden yellow to honey brown. This decor was inspired by the widely loved caramel candy with its different shades of color.

AU01 Authentic Mokka

AU02 Authentic Pecan

AU03 Authentic Caramel

Surfaces

Each decor of the Authentic Collection is available in three surface finishes.

NT

A silky matte effect ensures a delicate shimmer paired with the fine hammered look, which, when combined, creates an overall pleasing aesthetic for facades.

NY Sky

A convincing illusion of depth due to a pleasant to the touch, uneven surface. The matte-looking structure is combined with shiny inclusions that sparkles depending on how the light hits it.

NH Hexa

The deep studded structure of this surface not only looks good, but also ensures safety. The non-slip embossing ensures protection against slipping, on balcony floors, terraces, or stairs.

Legal Notice:

Please observe the applicable building regulations. We assume no liability in this regard.

Please check whether your construction project meets the requirements for the effective restriction of fire propagation (e.g. OIB RL 2, DE Sample Management Regulations for Technical Building Regulations MVV TB, etc.). This brochure is intended for professionals who are familiar with the relevant standards, technical regulations, legal requirements and relevant guidelines for building products.

These guidelines have been prepared with great care, but we would like to point out that the responsibility for the correct planning always lies with the planner and the responsibility for correct installation always lies with the installer
